

## ACCEPT MULTIPLE DEPOSITS ON A SINGLE SALES ORDER ... EASILY!

### WHAT DOES FLEXIPAY DO?

FlexiPay is a payment-processing tool that augments the standard Sage 100cloud functionality with the ability to **accept multiple deposits per sales order**.

All FlexiPay deposits are processed through cash receipts, which means you get faster reconciliation of funds to General Ledger.

### WHAT COMPANIES WOULD BENEFIT FROM FLEXIPAY?

FlexiPay enhances the stock Sage 100cloud process for posting customer deposits and it works with all forms of payment that you've integrated with Sage 100cloud, including **credit cards, checks, cash, and wire**.

Because the enhancement is so flexible, it's a **great fit for any company that routinely accepts multiple deposits on a single sales order**.

In addition, FlexiPay **integrates seamlessly with your Sage 100cloud system**, so it acts and looks just like every other part of your ERP.

### HOW FLEXIBLE IS FLEXIPAY?

FlexiPay stands out in the market because it can:

- Maintain stock Sage 100cloud negative posting and credit memo capabilities
- Seamlessly report on open deposits and deposit histories through FlexiPay
- Integrate with FlexiDeposit, the cash management tool that helps you settle deposits faster

FlexiPay is part of **VelocIT Connect FlexiSuite**, which also includes FlexiDeposit.
